ADDITIONAL INFORMATION SUPPORTING NJD (e.g., paragraph 1 – site conditions; paragraphs 2-3 – rationale used to determine NJD, including information reviewed to assess potential navigation or interstate commerce connections; and paragraph 4 – site information on waters of the U.S. occurring onsite):

The site was an approximate 25-acre area consisting of a gently to moderately sloping second growth deciduous forest located along the footslope of a mountain. Besides past logging, other disturbance included an abandoned sewer line.

The isolated wetlands consisted of several small hillside seeps with no evidence of channels or overland flow to any jurisdictional watercourse.

Several jurisdictional intermittent and small perennial streams were found here. The jurisdictional wetlands were located adjacent to these streams or were seeps that “fed” these streams, i.e., contiguous.
